

Java Programming Internship Tasks

✦ **Note:** You must complete **at least 4 out of the 8 tasks**. Completing all **8** is **highly encouraged** to improve your skills.

✅ **Submission Guidelines (for all tasks)**

- It is **compulsory** to upload a video of your project on **LinkedIn**, explaining what you built.
 - In your LinkedIn post, make sure to **tag Kodbud**.
 - Uploading your project on **GitHub** is **optional** but recommended for showcasing your work.
 - You must **submit the link(s)** to your completed tasks using the **Task Submission Form** provided in your **email**.
-

Task 1: Build a Simple Calculator (Console)

Explanation:

Create a CLI-based calculator that:

- Takes input from the user
- Performs addition, subtraction, multiplication, and division
- Uses switch-case or if-else for operations

Goal: Practice input/output and control flow.

Task 2: Create a Student Grade Management System

Explanation:

- Create a program to input student name, marks in 3 subjects
- Calculate average and grade (A/B/C/Fail)
- Display student report

Goal: Learn classes, arrays, and basic logic.

Task 3: Simple ATM Simulation

Explanation:

Simulate an ATM with options like:

- Check balance
- Deposit amount
- Withdraw amount
- Exit

Use: Loops, conditions, and basic methods.

Task 4: Number Guessing Game

Explanation:

- Use Random class to generate a number between 1–100
 - User tries to guess the number
 - Show hints: “Too low”, “Too high”, “Correct”
 - Track number of attempts
-

Task 5: Build a Basic Library Management System

Explanation:

Create a menu-driven system to:

- Add new books
- Display all books
- Search a book by title
- Remove a book

Use: ArrayList, custom classes, basic CRUD logic

Task 6: Create a Simple Login System

Explanation:

- Ask for username and password
- Store dummy credentials in a map or hardcode it
- Validate login and show success/failure message

Focus on: String comparison, Scanner input, and control structures.

Task 7: Build a Digital Clock

Explanation:

- Use Java's Thread and Date class
- Print time (HH:MM:SS) in real-time in the console
- Update every second

Goal: Understand multithreading and system time.

Task 8: Create a Notepad GUI (Optional Advanced)

Explanation:

- Use **Swing** to create a simple text editor
- Features:
 - Open/save file
 - Write and edit text
- Add menu bar with file options

Learn: GUI development basics in Java.
